

<i>Warm-Up</i>	Free movement warm-up with tennis balls, footballs, mini-rugby balls. Handpass/throw balls around with different movements In pairs, knee tag 30 sec and swap partners x3 In 3's-shoulder taps 30 sec and swap partners x3 Bear crawl & handshake both hands Crab crawl and foot tap-both feet Or any small-sided game or skills-based activity that gets the players moving	a) Jog forwards/backwards b) Skip forwards/backwards c) Side-to side diagonal leading left & right x3 e/s d) Side-to side diagonal backwards leading left & right x3 e/s e) Heel to toe walk with 3 sec balance x1 f) Ankling x2 g) Open/Close the gate h) Knee hug with calf raise i) Knee hug with external rotation j) HS/Inchworm with press up k) Kicking HS x2 l) Squat on ball x 10 m) Lunge with external rotation n) Hop, stick & hold into SLDL x3 e/s o) Triple stick & hold x3 e/s p) Broad jump to vertical jump x4	The purpose of a warm-up is to prepare the body and mind for the main activity that follows. Principles of a warm-up: Raise: core temp, breathing rate, heart rate Activate & Mobilise: ankles, calves, quads, hip flexors, core activation, glutes, shoulders, T-spine, wrists Potentiate: sprints, jumps, 1v1's to 3v3's
<i>Acceleration</i>	- Drive the lead arm up as you begin to sprint - Drive the back arm forward forcefully - Drive out so that the body is 45° to the ground - Drive the elbows down & back. Keep hands loose. Arms @90° from the elbow - Drive the foot into the ground with maximal force. The foot should strike directly below or slightly behind the hips. Falling starts/ Resistance (bibs or resistance bands)/ Press Up/Sit up/ Lying face up/lying face down/ ½ kneeling position, 3-point start/ tumble.	Game 1: Partner Chase 10 m Chaser starts 2 m behind the player being chased - Players start from a 3-point start x2 - Players start from a kneeling position x2 - Players start from a push-up position x2 - Players start from a lying position (face up) x2 - Players start seated facing backwards x2 (turn left & right) Game 2: Ball Drop Players partner up. One player stands 5m in front and drops 1 of 2 tennis balls or footballs to the ground from shoulder height. Player tries to catch the ball before the 2nd bounce - Player starts from a 3-point start x2 - Player starts from a kneeling position x2 - Player starts from a push-up position x2 - Player starts from a lying position (face up) x2 - Player starts seated facing backwards x2 (turn left & right; call before dropping the ball) Game 3: X's & O's Arrange 8 cones in a square and one in the centre to mark the central square. 1st team to get 3 of the same-coloured bibs in a row is the winner. Vary starting positions - Standing start - Player starts seated facing forward	Why is speed so important? What makes a fast sprinter? How can we improve our speed? - Strength (lower body, upper body & core) - Mobility & flexibility (especially ankle, hips, T spine, shoulders) - Power (ability to exert force into the ground quickly) - Mechanics- good posture, toe up, knees up, high hips, head up, stay tall, stay relaxed The fastest person is the one who can exert the most force into the ground (strength) in the least time possible (power) and in the right direction (mechanics) Work: Rest ratio is very important. For every 5 seconds of work, give a min of 30 seconds of rest. Arrange players in groups of at least 6 to make this easier. Limit the number of reps. Quality over quantity always. Efforts must be maximal. More easily achieved by having a race, partner chase or timed

		➤ Tumble & sprint	
<i>Change of Direction/ Agility</i>	Deceleration To change direction, we must first slow down or stop. Take small, short steps - Stage 1: Push back into a quarter squat position. Bend at the knees, push back the centre of gravity. Ensure knees are aligned over the middle toe. ACL tears occur when the leg is in a straightened position as we decelerate, or when the knees cave in as we change direction - Stage 2: Shorten steps and finish in a lunge position-practice both sides - Stage 3: Shorten steps, turn hip, plant outside foot & turn 180° Practice all methods between 2x10m cones. Once technique is good, add a chaser COD: Y drill Open step x3 e/s Crossover Step x3 e/s <i>Curved Running:</i> Figure of 8 pursuit x2 (progress to solo chase) <i>Jockeying to Sprint</i>-use open step	Game 1: Safari Divide players into 3- group 1 are cheetahs, group 2 are gazelles, group 3 are crocodiles * Cheetahs * Gazelles * Crocodiles Cheetahs start 2 m behind the gazelles. Cheetahs chase the gazelles 10m. Gazelles must stop on the 3rd cone before the cheetahs catch them. Place a 4th cone 2 m beyond the 3rd cone. Crocodiles eat the gazelles if they do not stop dead at the 3rd cone. Each person moves up one position. Practice stopping in a quarter-squat stance, a lunge position, and a side-on stance—practice on both sides. Game 2: Run the Gauntlet - Defenders can only move laterally, attackers evade - Defenders can only move laterally, but try to block attackers; attackers evade - Defenders can move anywhere within their zones - Solo through 	- Agility is the change of direction or speed in response to a stimulus (opponent, team-mate or ball) - Composed of three distinct components – physical, technical and cognitive - Cognitive component must be included to make it game-specific
<i>Sports Generic & Sports Specific Games</i>	Practice technique, then add general movements without the ball and then make it sports specific by adding the ball	Game 1: Reaction Game P1 * * * Ball P2 * P3 *	

		 P4 Place 4 different coloured cones in a line, with a ball at the end. Each player picks a partner and faces the other across the line of cones (P1 faces P2; P3 faces P4). Have enough lines of cones to accommodate all players. Call a colour and the players must side-shuffle to the coloured cones until 'ball' is called. Both players then race to the ball. 1st player to touch the ball is the winner. Repeat using forward/backwards movement. Progress to attacking for a score: 1st to the ball is the attacker, other person defends Game 2: React & Shoot  P1 P2 Players face each other as above. P1 is a defender, while P2 is an attacker. Place a ball on each cone. P2 side shuffles between each cone while P1 tracks her. At any point, P2 can break for the ball and attempt to score. P1 attempts to block/NHT. Game 3: Solo through the Gates  D1 A1 A and D begin at equal distances from the gates at the side. - On 'Go', A attempts to get through one of the gates at the side before being tagged. - Repeat soloing the ball with D attempting a NHT - Allow D to react to the movement of A i.e. D goes when they see A going Repeat soloing the ball	
<i>Strength Circuit</i>	Strength is a foundation for all the other components of fitness. Positive associations between strength and power, strength and speed, strength and endurance, strength and skills and strength and mobility. NB in improved performance and injury prevention	Sample 12 station circuit with 3 upper body, 3 lower body, 3 core and 3 landing/crawling - Press Ups - Knee Tag - Stubborn Donkey - Bear Crawl - Single leg tug of war - Waiters Bow - Plank - Bunny Hops - IYTWL's	- Squat (Partner, Hands in front, Prisoner, OHS) - Lunge (Forwards, Backwards, Lateral, Curtsy) - Hinge (DL, hands across shoulders, SLDL) - Plank (4, 3 points of contact, side plank and variations) - Press-Up (regressions: wall, elevated, eccentric lowering, half press-up) - Inverted Row (partner assisted, resistance bands)

		10. Lunge with handpass 11. Russian Twist 12. Lateral Stick & hold	Jump & Land Vertical & Horizontal (DL-DL, SL-DL, DL-SL, Leap, Hop)
Endurance	- Isolated running e.g. shuttles, 21 to 21, MAS runs etc - Running drills with the ball - SSG's: vary no. of players, playing area, playing time, rules of the game etc Ensure unload week every 4-5 weeks to prevent overtraining	1. Interval runs  2. Running with the Ball  P2 works between the 2 cones for 30 sec. Cones are 20m apart KP to P1, take return ball off P3 KP to P3, take return ball off P1 Repeat with high catch and low catch Groups of 5  P1 kick passes over P2's head to P3 and continues to P2's position (20m sprint) P2 waits until the ball is caught by P3, times the run and solos to the end (40m sprint) P4 kick passes to P2 and sprints to P3's position. P3 times the run and sprints to the end 3. SSG's e.g. 6 v 6 possession game; endzone, 4-goal games etc	The methods used will depend on the group being coached, available space, the session design, etc. Conditioning using the ball is preferred, if possible, especially with younger groups, as it saves time, improves speed & agility in a sports-specific manner and helps players improve their passing skills. Some top-up isolated running may be necessary with older/adult groups.
